

## SO3+SO6 TRELLIS DOORS SURPASS AUSTRALIAN STANDARD 5039 FOR SECURITY DOORS

The SO3+SO6 heavy-duty trellis doors have surpassed the ANTI-JEMMY TEST and DYNAMIC IMPACT TEST for security doors.

The testing was carried out in Feb 2013 at an accredited National Association of Testing Authority testing facility.

Stringent simulated break in attacks were carried out repeatedly to verify the strength and durability of the doors, including the use of a heavy-duty screwdriver and a 44kg metal ball – the trellis doors successfully repelled these attacks on each occasion.

The success of the trellis doors in surpassing these attacks was due to the 3-contact point locking system, the specially engineered anti-jemmy locking extrusion and the full metal surround frame—a testament to our company's excellent manufacturing and high quality product standards for our security doors.

The SO3+SO6 remain the only trellis security doors on the Australian market that have been tested against such stringent conditions.
