

The S08 Curved Steel Trellis system is suitable for securing curved or circular apertures.

Why should I choose the S08 for my business?

- **Versatility**

The S08 will fold away to 15% of its closed size. The S08 will secure curved counter tops and reception areas, curved shop fronts, eateries, dining areas, and bay windows.

- **Custom Made**

Measurement and fitting is carried out by our design team.

- **Flexibility**

The S08 can lock at one end or in the centre. Generally patio bolt locking to floor is used. When a floor track is used it is recessed or is removable. The S08 is top hung.

S08 Curved Trellis

Technical Specifications

Refer to basic S05-1 technical specifications for stack width dimensions

Plan View

Notes:

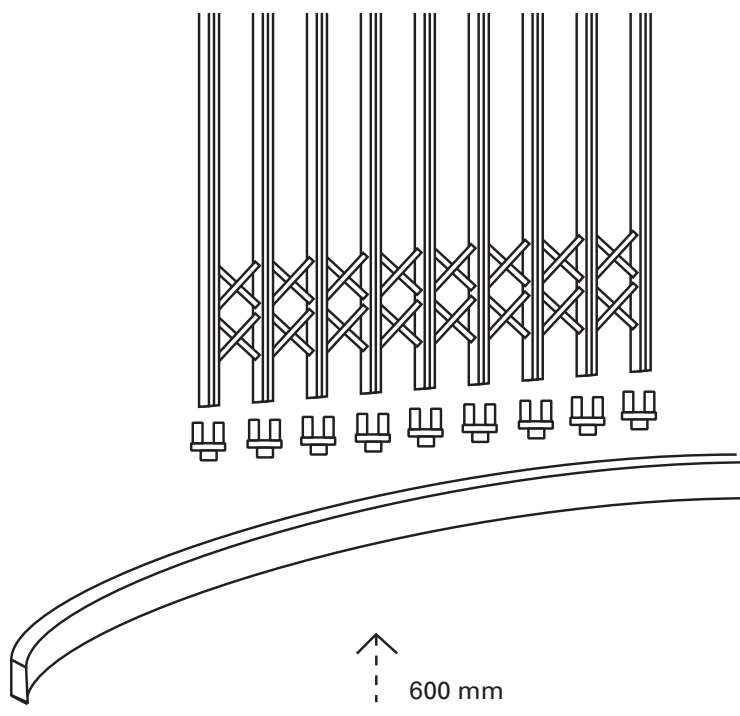

The S08 is top hung.

The S08 can be made to any height up to 4000mm and any width.

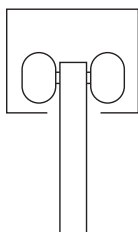

The tightest radius is 600mm.

This door uses a heavy duty top track and support wheels. Bottom patio bolts can be used to lock the door to the floor.

Door weight is 12kg/m².
